

architecture for post-disaster reconstruction

exhibition of projects

University of Canterbury
30 April – 2 May 2008
Christchurch . New Zealand

Université de Montréal
Faculté de l'aménagement
October 23 - 25 2008
Montreal . Canada

undergraduate and graduate students are invited to bring out innovative ideas to improve post-disaster reconstruction processes in developing countries.

the i-Rec competition invites participants to develop a balanced approach, reconciling technology and local resources, and promoting long-term development while meeting short term needs.

projects must include the design of technical aspects of housing and a scenario of organisational design and logistics to articulate local and external participants, their actions and their resources.
